EDUCATION

DigiPen Institute of Technology

Keimyung University Daegu, Republic of Korea

B.S. in Computer Science in Real-Time Interactive Simulation

April 2027

Relevant Courses: Advanced C/C++, Data Structures, Computer Graphics, Calculus, Linear Algebra

TECHNICAL SKILLS

Programming Languages: OpenGL, C++, C, Custom OpenGL Engine, raylib, Python

Engines: Unreal Engine 5.4, Unity 2019.4, Unity 6.3(With Nintendo Class)

WORK EXPERIENCE

Teaching Assistant | DigiPen Institute of Technology | Washington

Jan 2026 - April 2026

- Mentored students in C++ to develop independent debugging and high-level programming skills.

Teaching Assistant | DigiPen Institute of Technology | Washington

Sep 2025 - Dec 2025

- Addressing student questions effectively and efficiently, and inducing students to solve python problems.
- Collaborated with other colleagues on hard questions or a lot of work in Intro to Scripting & Prog class.

Teaching Assistant | DigiPen Institute of Technology | Washington

Sep 2025 - Dec 2025

- Grade students' homework in Mathematics in Music & Sound class.

PROJECTS

Programmer | Wing Dragon Heist | 3D Platformer

Sep 2025 - April 2026

- Integrated game assets and developed custom Cel-shaded materials in Unreal Engine to achieve a stylized visual aesthetic.
- Architected diverse particle systems using Niagara for player actions, hit effects, projectile effects (arrows), climbable walls, and dynamic UI elements (HP/Stamina bars).
- Developed UI for Key items and text systems that trigger based on player inventory and environment state.
- Modified environment shaders and gameplay systems, including enemy spawners and light-based mechanics that prevent "Shadow Mode" entry.

Programmer & Engine Developer | ABRAXAS | 2D Platformer Roguelike

Sep 2024 - Jun 2025

- Designed and implemented graphic rendering, audio processing, data input systems, camera control, game windows, and inputs using OpenGL for a custom game engine.
- Developed a character selection screen interface, game numerical adjustment objects, and icons.
- Debugged and Resolved specific object collision issues—prevented all other objects from passing through this object.

Programmer& Engine Developer | Shadow Dimension | 2D Platformer Puzzle

Mar 2024 - Jun 2024

- Contributed to the creation of a modular game engine and core player-object interaction system using raylib library and c++.
- Developed a 3D interaction detection and resolution system, along with a visualization system for top/side view properties in 3D Modulus.
- Created a dynamic data update system that allows real-time changes using external files.

- Designed and implemented player movement and object interaction systems using raylib library and c++.
 - Developed an object image conversion function based on specific conditions.
 - Built a 2D collision detection and resolution system.
 - Created algorithms for random tile-based map generation and object placement.
 - Implemented dynamic light source diffusion and field of view limitation systems.
 - Developed a developer mode with features such as speed adjustment, time control, and immediate interaction.
-
